

## We are Sketchup Specialists

Chillibreeze has launched its latest specialty service – Google Sketchup 3D services and artistic architectural illustrations aimed at providing professional support services to architects, builders, developers, interior decorators, landscape architects and real estate companies anywhere on the planet. Our team is competent to create floor plans, 2D images from photos, elevation drawings, 3D models, walk throughs, perspectives and more.

### What we can do for you:

- » **3D Models:** Your house or office made into a 3D model. This is useful for visualizing preconstruction.
- » **Enrichment:** If you have an existing outline or model of a building, send it to us and we will illustrate it with additional artistic effects including watercolor, photo-realistic, ink and pencil sketches and more.
- » **Google Earth:** Let us put you on the map so that your house or building can be seen from space and visitors can fly over it. Hotel owners and real estate developers love this service
- » **Artistic Illustrations:** You send us a photograph, floor plan or idea – we draw it! Use it for a printed brochure or on a website.

### How we do it:

We combine the use of the latest software to get high end results. Adobe Photoshop, Google Sketchup and Maxon Cinema 4D are the tools we use together to produce beautiful results. For example, we use Google SketchUp software for drawing and designing 2D or 3D buildings then our talented artists use Photoshop to add color, texture, clouds and landscaping to create for you a quality piece of art.

**Process:** We typically start a project with a photo and a brief from the customer specifying what they need.

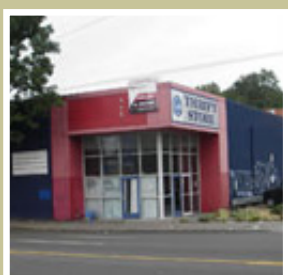

**Client redesigned project:** The images below are from a project that we did for PeoplePawn Financial Services, based in Seattle, USA. The founder, Patrick Lawrence Kane, wanted us to create a visual presentation for a proposed chain of retail stores, and needed a concept mock up.

He sent us an actual photo of an existing building and a floor plan. The building was first sketched in 3D using Google Sketchup, and then exported to Cinema 4D, where realistic effects were added.

### Customer Quote:

*"I like and appreciate what you guys have done!"*

Final Image

**Client redesigned project:** The Chillibreeze Sketchup team helped to re-model a US based client's home in Ohio. We worked closely with the client's architect, and came up with samples of the re-design as 3D models, so the client could decide on the kind of changes he wanted to make to his home before actually re-building it.

### Customer Quote:

*"Very good work. Timely and well done. A++"*

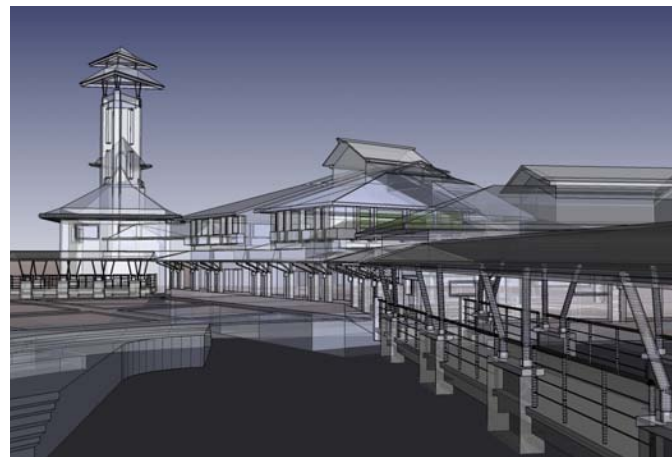

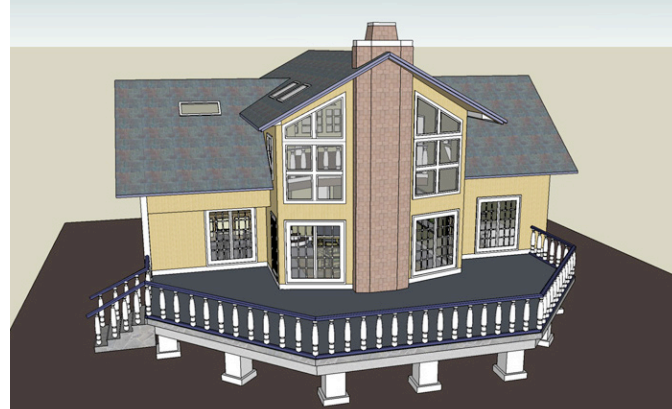

**Thom Cooper**  
Ohio, USA.
